

Hunters Point Update to Regional Administrator

September 26, 2018, 2 pm

Parcel A

- 9/19 Home Owners Association Meeting – About 20 residents attended, and several asked for testing inside homes for reassurance to public. CDPH said scientists are looking into that possibility. Meanwhile they offered testing dust inside homes. The dust testing will include more forms of radiation than the outdoor testing. CDPH also announced it is starting scanning of homes under construction much earlier than originally scheduled.
- 9/24 Mayor's Citizens Advisory Committee Meeting – About 35 residents expressed distrust, asked for testing deeper in Parcel A and more thorough testing basewide. Leader Pelosi's staff attended and said will reconvene agencies late fall.
- Navy/CDPH – Delaying technical discussions of testing inside homes several weeks while CDPH finishes scanning of homes not yet occupied.
- Next steps – Today we recommended to DTSC and Navy middle management that they encourage senior management at CDPH and the Navy to move more quickly to resolve technical challenges to developing a plan to test inside homes. We offered EPA technical assistance. At some point we may need to ask your help to reach out to senior management at CDPH and the Navy if we do not see more movement soon.

Parcel G

- Navy revised Work Plan – The Navy requested an extension from 9/28 to 10/17, and we agreed. At today's meeting, Navy management agreed to accept all the most important recommendations from EPA and State regulators. We will need to review the whole document to confirm it meets our expectations, but we are cautiously optimistic. The Navy agreed to the regulators' definition of the trigger to 100% excavation of trench units if contamination is found in the first 33% trench units of greatest concern.
- 9/24 EPA sent comments on Navy draft Sampling and Analysis Plan (SAP) – Most comments similar to those already made 8/14 on Work Plan.

Communications/Next steps

- October 1, Supervisor Hearing postponed – Her office will let us know the new date.
- October 3, Navy Open House Workshop Radiological Update - EPA staff will attend.
